

First Bytes 2014 - R Technology Workshop

R is the most popular free software environment for statistical computing and graphics. `ggplot2` is a data visualization package for R that that can be used to produce publication-quality graphics. Both technologies and more (RStudio, Knitr, Slidify, and Shiny) will be explored in this workshop.

This is how my RStudio is configured:

```
sessionInfo()
```

```

You also need to install LaTeX if you want to generate PDF files from Knitr.
